Resize configuration

Basic / 4 vCPUs / 8 GB RAM / 160 GB Disk

[Edit](#)

Recovery mode

Use the Recovery Console if you need to use the recovery ISO or you can't connect to your Droplet with the Droplet Console. To use the recovery console, you must enable password authentication. If necessary, you can reset your root password below.

[Edit](#)

Recovery console

Use the Recovery Console if you need to use the recovery ISO or you can't [Launch Console](#) connect to your Droplet with the Droplet Console.

Tags

Your Droplet currently has no tags.

[Edit](#)

Tags are a great way to group droplets. Learn how to get the most out of tags by reading our [community tutorial](#). ↗

Project

[Edit](#)

first-project

Restart

A power cycle will immediately hard reset the server. You should only choose this option when you are unable to reboot the Droplet from the command line.

[Restart](#)

Turn off Droplet

This will turn off the Droplet, dropping any existing connections

[Turn Off](#)

Reset root password

This will shut down your Droplet and set a new root password.

[Reset Root](#)

Rebuild

This will rebuild your Droplet using the image specified and its original configuration parameters. The rebuild process will destroy all data currently on this Droplet, so back up anything you want to keep.

[Rebuild](#)

Destroy

This is irreversible. We will destroy your Droplet and all Droplet data will be scrubbed and irretrievable.
